Fog trumpet giving blasts at intervals of 30 seconds. Also, a bell, struck by hand, both located in the old tower; all to be left on starboard hand going into Portsmouth.

Portsmouth Harbor Light; white tower; fixed white light, visible 14 miles; on left side of inner entrance to Portsmouth harbor. To enter Portsmouth harbor get Portsmouth light to bear N ¾ W, and run for it until Whale's Back light bears S E by E and you are abreast the southern end of Wood Island, then steer N ½ E until past Fort Point, and Portsmouth lighthouse bears W by S ½ S, then steer N W until the light bears S by E, and anchor; or, when Portsmouth light bears S by E, steer S W ¾ S, and anchor close in shore in the cove to the westward of Fort Constitution in from 2½ to 6 fathoms. Strangers in entering Portsmouth harbor should take a pilot if possible.

Newburyport Harbor Light; white tower; fixed white light, visible 12 miles. Also, a beacon, range of light, 336 feet in front of main light; black and white tower; fixed white light, visible 8 miles. These lights, in range, guide across the bar, in best water; bar constantly changes; outer bar buoy is in range with inner bar buoy and both lights; the beacon is moved as the channel changes. This station is on the north end of Plum Island, and on the south side of entrance to the Merrimac River, Mass. (Strangers should not attempt to enter.)

Annisquam Light; white tower; fixed white light, visible 13 miles; a harbor of refuge for small vessels; on Wigwam Point, east side of entrance to Annisquam harbor; 6 feet of water on Squam Bar at low tide. To cross the bar, bring the light to bear south and run for it, leaving it on the port side; then run for the Lobster Rock Beacon, and leave it on the port side also.

Straitmouth Island; on south side of Sandy Bay, entrance to Rockport harbor; white tower; fixed white light, visible 11 miles; to be left on port hand in going to Rockport. Bad ledges lie off this light. Strangers should keep the north shore of Sandy Bay best aboard on entering Rockport; shelter only for a few small vessels.

Cape Ann Lights; latitude 42° 38m 15s; longitude 70° 34m 30s W; two grey granite towers, 165 feet above sea level; fixed white light, visible 20 miles; the lights are 900 feet apart, in range at S S W and N N E; located on Thatcher's Island off Cape Ann, and the northern limit of Massachusetts Bay; to be left on the starboard hand in going towards Boston. a blast of 8 sec. and a blast of 4 sec., with alternate intervals of 4 and 44 secs.

Gloucester Light, on Eastern Point; on east side of entrance to Gloucester harbor; white tower; a revolving red light, showing once every 5 seconds, visible 9 miles. When coming from the Eastward, bound into Gloucester harbor, give the light a good berth to clear Eastern Point Ledge (spar buoy); then, when the light bears N E ¾ N, run N W ½ N until the upper harbor light bears N E by N ½ N, then run for it, and anchor ½ mile S by W from the light. Also, a bell on Eastern Pt., alternately giving a double and single blow, then an interval of 30 secs., then a single blow followed by an interval of 30 secs.

Gloucester Harbor Light, on Ten Pound Island, east side of entrance to inner harbor; white tower; fixed white light, visible 11 miles; to enter harbor, bring this light to bear N E by N ½ N, and run for it until Eastern Point Light bears S S E, and anchor in channel way or continue until Eastern Point light bears S, then steer E N E until Ten Pound Island light bears N, and anchor in S E harbor, in from 4 to 6 fathoms—hard mud; or, from this point steer about N W by N between Ten Pound Island Ledge buoy and Ten Pound Island (giving the point of the Island a good berth), until the light bears E, then steer N ½ E until the light bears S by E, and anchor in western harbor.

Automatic Buoy; a whistling buoy is moored ¾ of a mile, S by W from Eastern Pt. Light, which is removed from May 15th to Oct. 15th of each year.

Baker's Island Lights; latitude 42° 32m 10s N; longitude 70° 47m 10s W; two white towers, ranging S E and N W; fixed white light, visible 15 miles; located on the north end of Baker's Island, south side of entrance to Salem and Beverly harbors. In coming from the southward vessels bound to Salem keep the lowest light open to the east of the high light, and run for it; this guides to the eastward of the South-east Breakers and Searl's Rock. Give Baker's Island a berth of not less than half a mile, leaving it on the port hand, then run for Hospital Point Light, bearing about W by N ½ N, until Derby Wharf light is in range with Fort Pickering light, when Salem harbor will be to the W S W of you, and Beverly harbor W by N ½ N. Also, on Baker's Island a bell which strikes two quick blows each half minute. For better information, a lens panel has been placed in "Hospital Point" Light, which makes a more brilliant light in the line of the ships' channel from Baker's Island than on either side, and serves to keep vessels from danger on either side.

Hospital Point; grey tower; fixed white light, visible 13 miles; on Hospital Point, north side of entrance to Salem and Beverly harbor.

Fort Pickering Light; red tower; fixed white light, visible 10 miles; on Winter Island, north side of entrance to Salem harbor. On entering Salem harbor from near Hospital Point, get Derby Wharf light in range with Fort Pickering light to clear the Haste Shoal; good anchorage half a mile S W by S from this light, with Derby Wharf light bearing W by S.

Derby Wharf Light; on the end of Derby Wharf, Salem upper harbor; red tower, fixed red light, visible 9 miles.

Marblehead Light, on Marblehead Neck, south side of entrance to Marblehead, and to Salem South Channel; white tower; fixed white light, visible 11 miles; good anchorage half a mile W by S from this light. To enter harbor, bring the light to bear N W, and run for it until within two miles of it, then bring it to bear W N W, and run for it, leaving Marblehead Rock (a high rocky Islet with beacon at top) 150 yards on your port hand, and when it bears S W run N W ¾ N until the light bears S by W, then run S W ¾ W into the harbor, and anchor between the light and the town.

Egg Rock Light; white tower; fixed red light, visible 12 miles; guide to

Swampscot anchorage and to Broad Sound. Leave it 1½ miles on the starboard hand on entering Broad Sound.

Minot's Ledge Light; latitude 42° 16m 9s N; longitude 70° 45m 34s W; entrance to Boston Bay; granite tower, natural color, 100 feet high; fixed white light, visible 17 miles. Davis' Ledge Buoy bears E by S; Boston light bears N W ½ W, 7 miles. This course must be kept good, northerly, to pass Bell Boat, off the north side of the Harding's Ledge (about 4¾ miles from Minot's Ledge Light). A good mark to clear the Harding's Bell Boat, after passing Minot's light, is to keep Long Island Head light (fixed white) just open to the north of the Narrows light, which is a red light.

Boston Light; latitude 24° 19m 39s N; longitude 70° 53m 25s W; on Little Brewster Island, north side of entrance to main ship channel to Boston; white tower; white flash light, flashing once every half minute, visible 17 miles. Also, an air trumpet, giving blasts of 7 seconds, followed by interval of 43 seconds. From Cape Cod highlands the course for Boston Light is N W by W ¼ W, which well clears Minot's Ledge and the Hardings; then, when well past Minot's, bring Boston light to bear W by N ½ N and run for it until within ⅓ of a mile of it or until the Beacon light bears about W by N, then run W ¼ S until the Beacon light bears W N W, then run W by N leaving the Beacon light 100 yards on your starboard hand, then steer N W ¼ W (keeping the middle of the channel) for the Narrows between Galloups and Lovell's Islands, then about N W ¾ N for the bell buoy off Nix's Mate, which leave on port hand, then run W by N ¼ N for Fort Independence, leaving the lower middle buoy, red can, No. 6, a good berth on your starboard, and State Ledge buoy, red Nun No. 8 close aboard on your starboard; then run about N W ¼ N for the upper middle buoy, black Nun No. 9, which leave on your port, then the course to Long Wharf or to good anchorage is about N W ¼ W. If making Boston ship channel from Cape Ann, get Thatcher's Island light to bear N N W from 2 to 3 miles, then steer S W ¼ W until Boston light bears W by N ½ N. Then proceed as before given.

Narrows Light; brown house; fixed red light, on the right hand side of Narrows, in ship channel entrance to Boston harbor.

Long Island Light; on the N E end of Long Island and southern side of entrance to Boston inner harbor: white tower; fixed white light, visible 16 miles. In coming up ship channel, and after leaving Nix's Mate buoy on the port hand, and Long Island Light bears W by S ½ S, run W by N ¼ N for the south end of the Castle until the Castle North Wharf bears N W by W ¾ W, or abreast of the State Ledge Buoy (red, No. 8), then N W ¼ N to the Upper Middle Buoy (black, No. 9), which leave on port hand, then the course to Long Wharf is N W ¼ W. But if approaching Boston from Cape Ann, via Broad Sound, bring Long Island Light to bear S W by W, and run for it until Deer Island Point Beacon bears N W by N ½ N, three-eighths of a mile distant, then W by N ¼ N up the harbor. Strangers should bear in mind that in the middle of Broad Sound there is but 8 feet of water at low tide; but by keeping on the southern side of the Sound, leaving the Graves Automatic Buoy half a mile on the port hand and the Devil's Limb Buoy (black can No. 1) ⅛ mile on port hand, and running straight to Ram's Head buoy (black can buoy No. 5) about W S W, passing Aldrich's Ledge buoy (black can No. 3) ¼ mile on port, then leaving Ram's head 50 yards distant on port, and run about W ¼ S to clear Deer Island Point Beacon, you can carry 12 feet safely. From the Beacon you will steer W ¾ N for lower middle buoy, then W by N ¾ N for State Ledge buoy, when proceed as before given.

Explanatory.

Aphelion—The point of a Planet's orbit farthest from the Sun.

Apogee—That part of the Moon's orbit farthest from the Earth.

Astronomical Day is reckoned from noon to noon through the 24 hours. Thus, July 21, 9h, is 9h A of July 21, and July 21, 15h, is 3h M of July 22.

Conjunction—A Planet directly between the Earth and the Sun is said to be in Inferior Conjunction with the Sun. A Planet with the Sun directly between it and the Earth is said to be in Superior Conjunction with the Sun. Planets are said to be in conjunction with each other, or with the Moon, when they are in the same sign and degree.

Declination—The distance of a heavenly body from the Equinoctial, measured north or south, in degrees or minutes, on a Meridian.

Ecliptic—The plane of the Earth's orbit, so called because Eclipses can take place only when the Moon is on or near it.

Elongation—The distance of a Planet from the Sun as seen from the Earth.

Equinoctial—The circle in the heavens traced by the Earth's Equator.

Node—That part of the orbit of a heavenly body which intersects the Ecliptic. If the body is passing from south to north, it is called the Ascending Node; if from north to south, Descending.

Opposition—A Planet with the Earth directly between it and the Sun is said to be in Opposition to the Sun.

Penumbra—That portion of space around the shadow of the Earth, in passing through which the Moon diminishes in brightness, in consequence of a part only of the Sun's rays reaching her surface.

Perigee—That part of the Moon's Orbit nearest to the Earth.

Perihelion—That part of the Planet's Orbit nearest to the Sun.

Quadrature—Two heavenly bodies are said to be in Quadrature when they are distant from each other by one-fourth of the Zodiac, or three signs apart.

The Sun's Declination and fast or slow of clock are given for apparent noon, or time of passing the Meridian of St. John.

HATS, CAPS, AND FURS, 61 CHARLOTTE STREET.

It will pay you to see James T. Hurley's Samples of Boots and Shoes.

The Moon's Southing is given in Astronomical time for the Meridian passage at St. John; and her Declination, when on the Meridian.
The Rising of the Moon is given from Full Moon to New Moon; and the Setting from New Moon to Full Moon.

TIDES.

The Tides in the Calendar are the Morning and Afternoon Tides at St. John and Charlottetown. In the Tide Table (page 38) will be found Constants for finding the time of High Water at each of the places given in the Table.

In editions of this Almanac prior to 1885 the Tides were only given approximately, but ever since they have been corrected for the varying distance of the Moon from the Earth, and also her angular distance from the Sun. They can now be depended on as accurate to at least the same degree as the Admiralty Tide Tables.

It will sometimes be found that when a Constant is added to the time of High Water at the Port of reference the sum exceeds 12 hours; in this case subtract 12 hours from the sum and the remainder will be the time of High Water at the required Port on the succeeding afternoon or morning, according as the Tide at Port of reference was a Morning or Afternoon Tide.

It will sometimes be found that a Constant to be subtracted is greater than the time of High Water at the Port of reference: in this case add 12 hours to the Time at the Port, subtract the Constant, and the remainder will be time of High Water at the required place for the previous Morning or Afternoon, according as the Tide at the Port of reference was an Afternoon or Morning Tide.

FORECASTING THE WEATHER.

Men have, from a very early period, studied the weather, on account of its great influence on their pursuits, in order if possible to predict its nature, and prevent those losses to the Farmer and the Sailor which result from violent storms.

The earlier students based their predictions on the phases of the moon, but an examination of the Greenwich observations for more than half a century has shown that this theory is entirely unfounded. Weather prophets like Moore, Zadkiel and Vennor claim in their Almanacs to be able to forecast the weather day by day for a whole year; but meteorological science in the British Isles, and the Signal Service of the United States, with the Weather Bureau of the Dominion, does not claim to forecast, with any certainty, the weather for more than three or four days at the most.

If an observer could obtain, at regular and repeated intervals, readings of the Barometer at stations distributed over a large area, he would be enabled to trace the march of the storm, for it has been found that the wind always blows towards the place of the lowest barometer reading; and so, by means of the telegraph, he may warn those places the storm is approaching. Still, mistakes are often made, and the forecasts are not always infallible, so that much remains to be done before meteorology can be ranked among the exact sciences.

In this month the day decreases in length 1 hour 8 minutes — 39 minutes in the morning and 29 in the evening.

WE keep our Travellers almost constantly on the road, yet they are unable to call upon our Customers as often as we would like. This we hope to remedy in the near future.

Merchants' Boxes.

Rent of small box $4, and of large box $6 a year.

Though every effort will be made in sorting letters to place them in the boxes, when the party addressed is known to have a box, the Postmaster does not hold himself responsible for this always being done; the primary rule being that all letters bearing the number of the house and name of street go there by letter carrier.

An order to place in a box letters belonging to another person than the owner of the box cannot be recognized, unless such letters are addressed to the care of the box or its owner.

Three deliveries daily in business sections of the city, commencing at 8.30 a.m, 1 p.m, and 3.30 p.m; two deliveries in other sections at 8.30 a.m and 3.30 p.m.

All letters mailed at the St. John Post Office within 15 minutes of the hour fixed for morning and evening deliveries will be dispatched by such deliveries.

Make complaints and inquiries in writing.

Post all letters and newspapers, etc., as early as practicable, especially when sent in large numbers.

Preserve, and request correspondents to preserve, envelopes of missent or delayed letters.

Business men should be careful to authorize but a limited number of persons to receive their letters, and only those in whom they have full confidence.

Have a letter box on your office door.

A letter once posted becomes the property of the person to whom it is addressed, and must be forwarded according to its direction. On no application, however urgent, can it be delivered back to the writer, or to any other person.

Letters addressed to mere initials or fictitious names will not be delivered unless addressed in care of a resident, or to some box in the Post Office.

Letters containing Gold or Silver Money, Jewels or precious articles, or anything liable to Customs duties, cannot be forwarded by Post to any of the Postal Union countries except the United States.

Time Ball on Northern Tower of Custom House.

The Ball will be hoisted half its elevation each day (Sunday excepted) at fifteen minutes before one o'clock. At one minute before one o'clock it will be hoisted its full height; and at one o'clock, mean time, the Ball will be dropped. A Chronometer keeping correct Greenwich time should then show 5h 24m 15s, and the difference between this and the time shown by a Chronometer, is its true error on Greenwich time at the moment. As the above hour of one o'clock when the Ball drops, represents 5h 24m 15s at Greenwich, the error of a Chronometer may be ascertained, no matter where the ship is lying. Masters of vessels arriving at Saint John should compare their Chronometers by the time Ball, as it will enable them to get the sea rate, which frequently varies from harbour rates. Latitude 45° 16′ 42″ North. Longitude in time 4h 24m 15s West of Greenwich. GEORGE HUTCHINSON, *Director.*

P. S. Any Shipmasters entering this Port, keeping a Meteorological Register, who may be desirous of having the accuracy of their Barometers verified, can do so by comparison with the standard at the Observatory at the Custom House. G. H.
